

A) Performance Profile Comparison

B) ECE Comparison (Key Differentiator)

Enhancement Strategy Evaluation (12-fold L2O-CV):

- Panel A: Performance profile comparison (Sensitivity, Accuracy, ECE)
- Panel B: ECE comparison - key differentiator between strategies
- Best overall: Ensemble strategy (ECE: 0.187, Accuracy: 75.0%)
- Four strategies achieved maximum accuracy (75.0%) with 91.7% sensitivity
- All strategies showed 0% specificity at 0.50 threshold
- ECE range: 0.187 (Ensemble) to 0.234 (Basic/Variance Features)
