

A) Gradient Boosting Feature Importance

B) Random Forest Feature Importance

C) Clinical-Ensemble Correlation Analysis

Feature Importance Analysis (REAL DATA):

- Gradient Boosting: HLA-B27+ most important (0.231)
- Random Forest: HLA-B27+ most important (0.245)
- Correlation: $r = 0.988$ ($p < 0.001$)
- Data source: `accurate_data_results/feature_importance.json`
