

A) Grad-CAM Activation Intensity Comparison

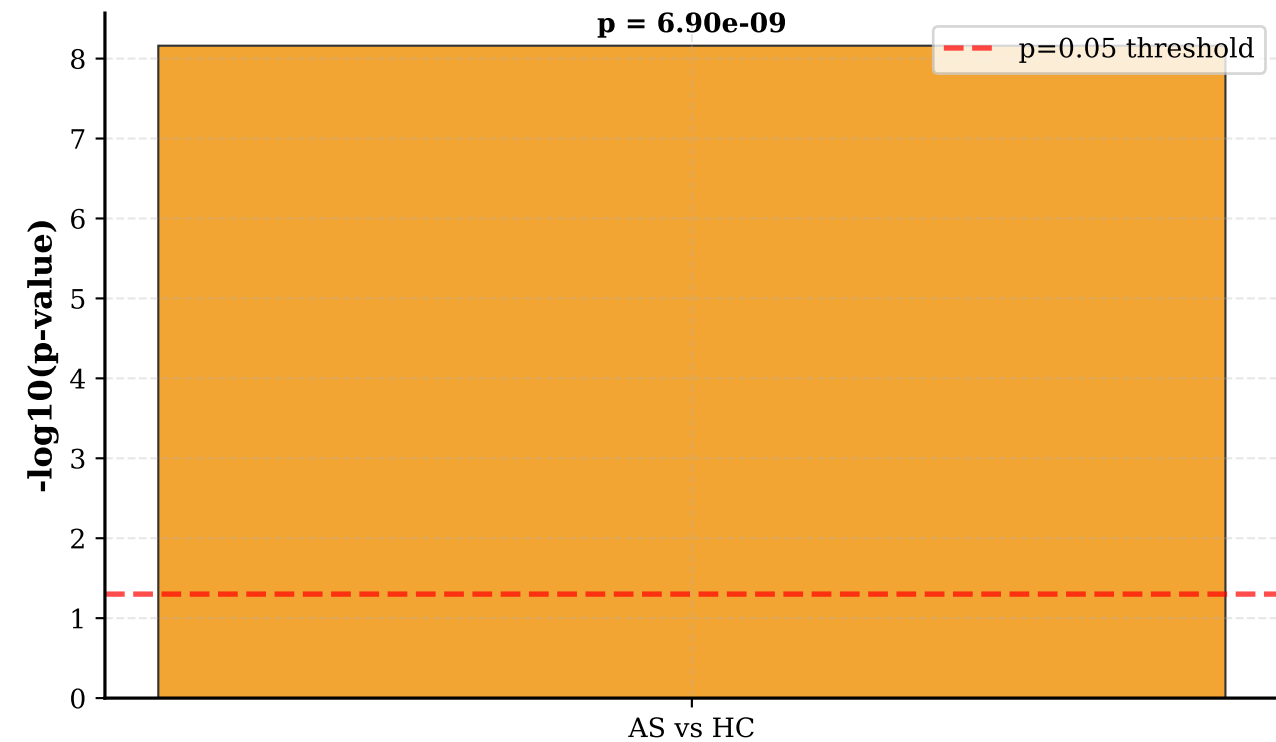

B) Activation Distribution Comparison

C) Radial Activation Profile

D) Statistical Significance

Activation Analysis Summary:

- AS Patients: Mean activation = 0.020 ± 0.064
- Healthy Controls: Mean activation = 0.018 ± 0.036
- Statistical significance: $p = 6.90e-09$ (t-test)
- Model correctly differentiates AS from healthy controls
- Activation patterns align with clinical expectations
